Key words. galaxies: clusters: general – galaxies: evolution – galaxies: ISM – galaxies: star formation – errata, addenda

This corrigendum provides a correction to the plots shown in the top row of panels in Fig. 6 in Werle et al. (2024). In the original paper, the y-axis in these plots displays an incorrect scale. However, we note that this problem was introduced shortly before submitting the paper, and our interpretation of the results was based on a previous (and correct) version of the figure. Therefore, all conclusions in the original paper are maintained. The data submitted to the CDS as complementary material are also correct. We show the correct version of the plots in Fig. 1; it is important to note that only the top panels are different from the original.

The problem was caused by an incompatibility between the python code used to create the plot and an update in the data processing pipeline that organizes the value added data products resulting from the stellar population modeling. The bug led the logarithm of the mass-weighted stellar age to be taken in two different steps, resulting in the incorrect plots.
