

Mass, light and colour of the cosmic web in the supercluster SCL2243-0935 ($z = 0.447$) (Corrigendum)

M. Schirmer, H. Hildebrandt, K. Kuijken, and T. Erben

Gemini Observatory, Casilla 603, La Serena, Chile
 e-mail: mschirme@gemini.edu

A&A 532, A57 (2011), DOI: 10.1051/0004-6361/201016348

Key words. gravitational lensing: weak – galaxies: clusters: individual: SCL2243-0935 – large-scale structure of Universe – dark matter – cosmology: observations – errata, addenda

Table A.1. NTT/EMMI spectroscopic redshifts of SCL2243-G and I (left), SCL2243-H (middle) and SCL2243-J (right).

RA (J2000)	Dec (J2000)	z	RA (J2000)	Dec (J2000)	z	RA (J2000)	Dec (J2000)	z

Notes. Cluster members are highlighted in bold face. SCL2243-J is hidden behind a foreground cluster at $z = 0.326$.

In Table A.1 of our original publication, containing coordinates and redshifts of three spectroscopic survey fields, all declination values were off by several arcminutes. In this erratum we provide a copy of this table with the corrected values. None of the results in our paper are affected by this error.

Acknowledgements. We thank Marion Schmitz from the NASA/IPAC Extragalactic Database (NED) who drew our attention to this mistake.
