Key words. globular clusters: individual: NGC 6981 – stars: variables: general – stars: variables: RR Lyrae – instrumentation: high angular resolution – errata, addenda

The celestial coordinates of the two variable stars in Table 1 have unfortunately been transposed. The correct table is shown here.

* Royal Society University Research Fellow.

Table 1. Details of the two new variable stars found in NGC 6981.

Variable star ID	Var. type	RA (J2000.0)	Dec (J2000.0)	T_{\max} (d)	P (d)
V57	RR1	20 53 27.38	-12 32 13.3	6166.779	0.334
V58	? ^a	20 53 27.12	-12 32 13.9	6166.76	0.285

Notes. The celestial coordinates correspond to the epoch of the reference image, which is the heliocentric Julian date $\sim 2\,456\,167$ d. The epoch of maximum light is given as a heliocentric Julian date ($2\,450\,000 +$) in Col. 5 and the period is given in Col. 6. ^(a) We are unable to classify this variable.
