Key words. planet-disk interactions – planets and satellites: formation – circumstellar matter – errata, addenda

An error occurred during the production process. An incorrect Fig. 10c was published. The correct Fig. 10 is published below.

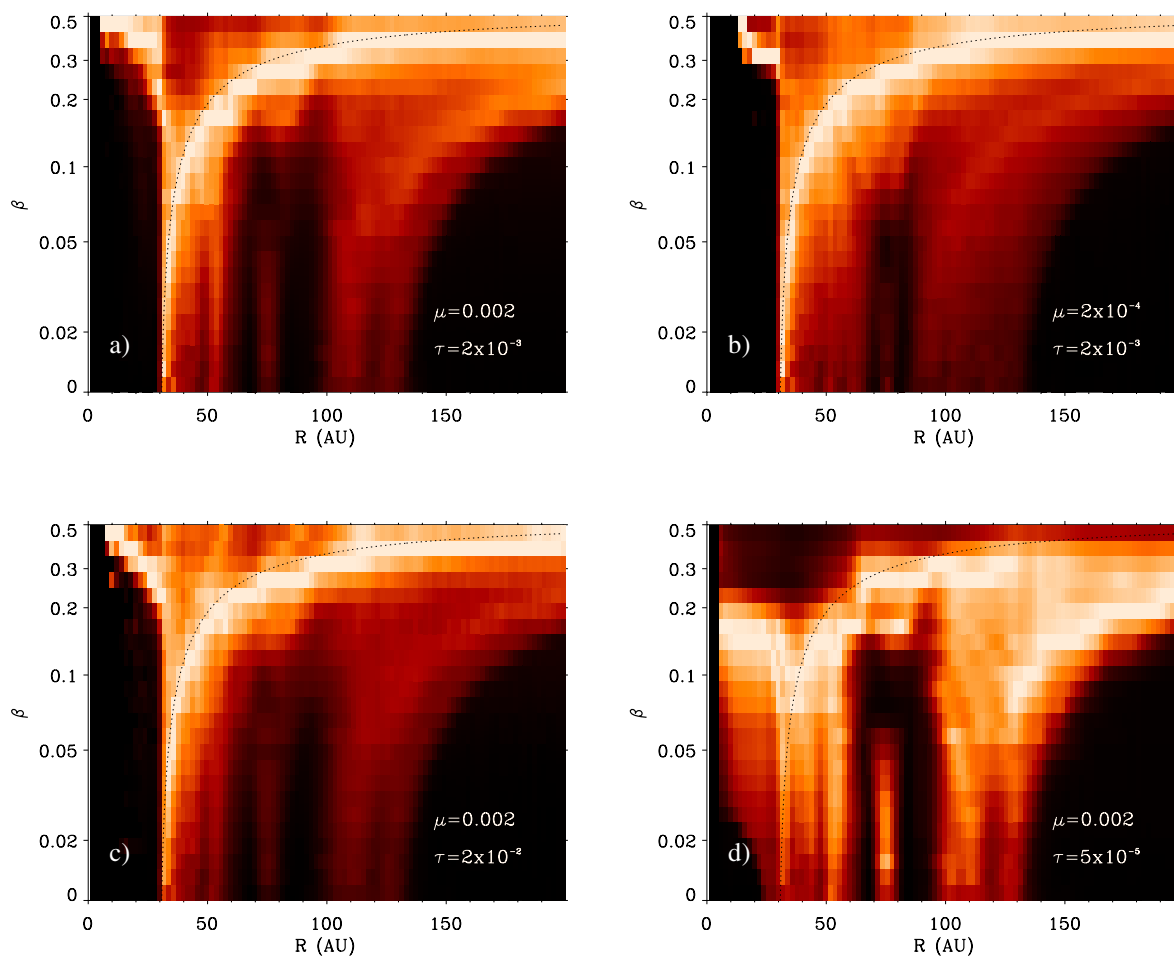

Fig. 1. Extended disc perturbed by an embedded planet. Azimuthally averaged radial distribution of the geometrical cross-section, as a function of particle sizes, for four different configurations: **a)** nominal (run G); **b)** Saturn-mass planet ($\mu = 2 \times 10^{-4}$, run J); **c)** high optical depth ($\tau = 2 \times 10^{-2}$, run I); **d)** low optical depth ($\tau = 5 \times 10^{-5}$, run H).
